

## Introducing the new AirPouch® 600™ – The ultimate in flexible, high-speed inflation systems for void-fill pillows, cushioning wrap and block-and-brace materials

The new AirPouch® 600™ is an ultra-versatile protective packaging system ideal for high productivity and low maintenance. This compact, all-electric system weighs just 13 kg and stands less than 254 mm tall. It can be used as a stand-alone, tabletop unit or integrated with a variety of accessories designed to increase efficiency.

Capable of running up to 23 m of material per minute, the AirPouch 600 features a user-friendly control panel that eliminates operator guesswork. Temperature and blower settings are preset – just select the material configuration and size and the system automatically adjusts for optimum performance. Or set the parameters best suited to your application through the easy-to-use control panel. A high-pressure blower maximises inflation and yield, while the advanced sealer design ensures these protective packaging materials remain inflated throughout the shipping cycle.

Our patented, knifeless material design eliminates the most common wear item found in similar inflation systems. Coupled with our new toolless belt removal capability, maintenance is simplified, and long-running reliability is achieved.

### Markets Served

- Ecommerce Order Fulfilment
- Pharmaceutical Fulfilment
- Third-Party Logistics
- Contract Packaging and Fulfilment

**New operator-friendly touchpad with icon-based settings for ease-of-use**

**Lightweight machine with a small footprint that fits effortlessly into any operation**

**A simple switch enables easy transition from tubes to wrap to pillows**

**Boxed material inflates from the first meter to the last, eliminating waste often experienced with rolled protective packaging**

## Features and Benefits

### Fast

Up to 23 m of product per minute

### Intuitive Controls

Preset for optimal settings, but can be operator adjusted

### Easy Integration

Autostart sensor turns all systems on simultaneously and signals accessories when system is in use

### Flexible

The AirPouch 600 is an economical, space-saving alternative to separate inflation units. Just one system can serve single or multiple packing stations, and all types of materials can be combined to meet industry-standard minimums, including:

- **FastWrap™ Cushioning Bubbles** contain a patented, channel-filled honeycomb design, which enables multi-direction wrapping and improved product protection.

- **FastWrap™ Block-and-Brace Tubes and Twin Pillows** offer lightweight and clean product protection along edges and around corners.

- **EZ-Tear™ Void-Fill Pillows** feature a unique, patented perforation between each pillow for quick, easy handling and effortless pillow separation.

### Reliable

All AirPouch films offer superior seals and puncture resistance and come standard in EarthAware® recycled and biodegradable\* blends. These lightweight materials are packed in high-yield boxes for on-demand inflation from start to finish, eliminating waste and reducing storage and shipping costs.

## System-Matched Materials

## Service & Support

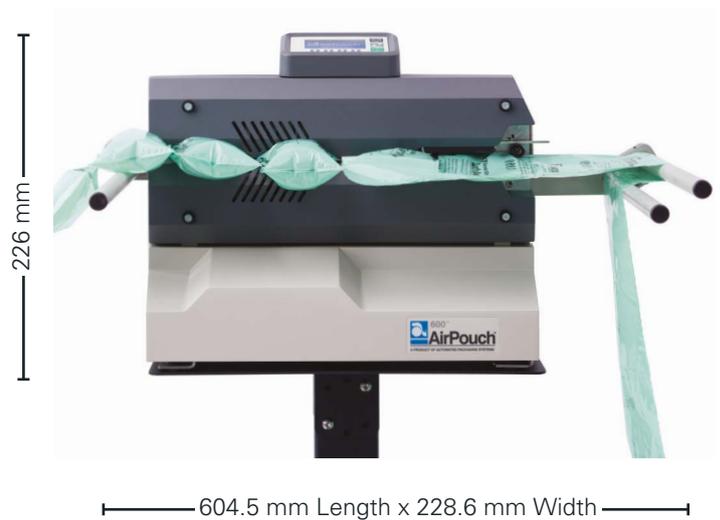

## Custom Engineering & Integration

## Optional Additions

- Adjustable stand
- Material shelf
- FastWrap winder
- Standard and customisable pillow hoppers
- Overhead tower assembly
- Sensor
- 610 mm Conversion kit
- Footswitch

## Technical Information

Weight	13 kg
Electrical	100-240 V, 1 phase, 50-60Hz, 2.4 kW

The AirPouch 600 is also available for purchase for lower volume operations.

\*49.28% biodegradation in 900 days under non-typical conditions. No evidence of further biodegradation. California currently prohibits labelling any plastic product as biodegradable.
